Already		1	2	3	4	5
color		(Silver)	Black (Copper)		Gold	nickel
Hardness		super soft	soft medium		-	super hard
triumph	F	←————→				
	R				←————→	
Caesar ZX-R F			←————→			
	R	←————→				
10 engine car	F				←————→	
	R				←————→	

*Caution: Do not confuse silver and nickel in the spring set. The one in the small bag is nickel (super hard).

*As a basic setting, start with the arrows shown in the table on the left. In general, making the front spring stiffer will result in understeer (mild), and making it softer will result in oversteer (quick). The opposite is true for rear. For roads with high grip, it is a good idea to use stiffer springs in both the front and rear.
